How to Listen to Tegrity Recordings from Angel (for use in elearning classes.)

What is Tegrity?

Tegrity is a set of recordings of lectures or presentations that your teacher has made for you as part of your class. These may be recordings right from the class or they may be extra. If your class uses Angel, you may have Tegrity recordings. You can listen to them, study them at your own speed and time, and have another chance to get the information for your class. This guide will help you find and use these recordings.

Step 1:
Open Angel to your class and Click On the Image.

Step 2:
You will probably see this security warning. Click On the Button. It will open Tegrity.
Step 3:
You will see this window.
Click On the presentation you want to see.

Step 4:
You will see this window. Click On the first frame. It will open the recording and/or presentation. Later you can go back and just play part of the recording if you want.

Step 5:
You will see the recording. Start the recording by Clicking On the play button.

Step 6:
You can control the playback by using these controls for start, pause, jump ahead or back, volume, and playback speed.

The playback speed control makes it easy for you to slow down or even speed up the speaking speed of the teacher. Give it a try!
